Your ETS Distributor (including ETS, Inc. if purchased directly), through a manufacturer’s warranty, warrants your tanning unit to be free of structural defects in material and workmanship, under normal use, for its lifetime. Your ETS Distributor will, at its discretion, repair any structural defect which materially affects the performance of the tanning unit, or replace the tanning unit.

For forty-eight (48) months following the shipping date of your tanning unit, your ETS Distributor will provide replacements for parts that prove to be defective in material or workmanship. Fluorescent lamps, and lamp starters are warranted against manufacturer’s defects for a period of ninety (90) days following the shipping date of your tanning unit. Acrylics will be warranted against manufacturer’s defects for a period of 1 year (prorated).

Labor costs associated with repair or replacement work covered by this warranty will be reimbursed for repair or replacement work required to be performed for a period of one (1) year following the shipping date of your tanning unit. Normal wear and tear, damage from misuse or abuse, damage incurred in transit or damages resulting from unauthorized repairs or modifications are not covered by this warranty. Warranty coverage does not include cosmetic abnormalities such as scratches, nicks, dents, or other cosmetic changes that do not materially interfere with the function of the tanning unit.

THIS STANDARD 48 MONTH WARRANTY IS EXPRESSLY MADE IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING ANY IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, WHICH ARE HEREBY DISCLAIMED. No one has the authority to change or modify this Standard 48 Month Warranty in any respect. To obtain service under this Standard 48 Month Warranty, contact your authorized ETS Distributor (or ETS, Inc. if purchased directly). Proof of purchase, including serial number, is required.

IN NO EVENT SHALL YOUR DISTRIBUTOR OR THE MANUFACTURER BE LIABLE AT LAW OR IN EQUITY FOR ANY LOSS, LIABILITY, DAMAGE OR EXPENSE IN AN AMOUNT IN EXCESS OF THE PURCHASE PRICE RECEIVED, OR FOR LOSS OF USE OR PROFITS, LOSS OF TIME, INCONVENIENCE, RENTAL OR SUBSTITUTE PRODUCTS, LOSS OF BUSINESS, LOSS OF INCOME, OR ANY OTHER INCIDENTAL, INDIRECT, SPECIAL OR CONSEQUENTIAL DAMAGES. Some states do not allow the exclusion or limitation of incidental or consequential damages, and the above limitation or exclusion will not apply to residents of some states. This Standard 48 Month Warranty gives you specific, legal rights and you may have other rights which may vary from state to state.

All warranty service must be performed by an authorized service person. All labor charges must be authorized by your ETS Distributor prior to the start of repairs and must not exceed the established rates and time allotment policies established by your ETS Distributor. If your tanning unit must be returned for service, all freight charges shall be at your expense. Contact your ETS Distributor for the authorized Service Center nearest you. This warranty is serial number specific and only applies to tanning units purchased through an authorized ETS Distributor. This warranty is extended to the individual or legal entity whose name appears on the original sales document and may not be transferred to any other individual or legal entity. This warranty is void if the tanning unit is modified in any manner from its original design.

To obtain warranty service, contact your place of purchase. Proof of purchase, including serial number, is required for verification. Contact ETS, Inc. only if you purchased your equipment directly.
Welcome

Congratulations on your purchase of this technologically advanced sun tanning unit. It has been designed to provide years of dependable service for you.

Please read all the instructions in this booklet before installing and using the unit. Always be sure to observe all safety precautions.

Safety Information

DANGER: Ultraviolet radiation. Follow instructions. Avoid overexposure. As with natural sunlight, overexposure can cause eye and skin injury and allergic reactions. Repeated exposure may cause premature aging of the skin and skin cancer. WEAR PROTECTIVE EYEWEAR; FAILURE TO MAY RESULT IN SEVERE BURNS OR LONGTERM INJURY TO THE EYES. Medications or cosmetics may increase your sensitivity to the ultraviolet radiation. Consult physician before using sunlamp if you are using medications or have a history of skin problems or believe yourself especially sensitive to sunlight. If you do not tan in the sun, you are unlikely to tan from the use of this product. Children, the elderly, or fair skinned people who always burn easily and either never tan or tan minimally should not use this equipment.

To use, lie down under canopy and pull down as far as adjustment will allow maintaining at least 3 inches (7.6 centimeters) between your body and canopy clear plastic panel and side tanner clear plastic panel, otherwise overexposure may occur. Minimum use distance elsewhere is touching the clear plastic panels. Do not use without clear plastic panels in place. Untanned persons should not tan on consecutive days during their first week of tanning. Never tan more than once a day. Tanning normally appears after the first few sessions and maximizes after approximately four weeks. Tan once or twice per week thereafter to maintain appearance. Persons already having a base tan may begin at advanced levels corresponding to the extent of their base tan.

New lamps emit approximately 10% more ultraviolet radiation during the first 50 hours of operation. Recommended tanning times should therefore be reduced by approximately 10% during that period.

WARNING: • Read the instructions booklet before using this sunlamp product. • All persons in the room should wear protective eyewear when lamps are on. Recommended eyewear: provided eyeshields or equivalent eyewear as defined under 21 CFR 1040.20. Other types of eyewear may not provide adequate protection. Failure to use protective eyewear may result in severe burns or other eye injury. If discomfort develops, discontinue use and consult a physician.

ONLY THE FOLLOWING LAMPS HAVE BEEN CERTIFIED FOR USE IN THE 548:

- BRONZING SUN™ PLUS Wolff® Model BSP71-T12-100WR Bi-Pin
- SPEED® 225R Wolff® Model SPD71-T12-225R Bi-Pin (Bench lamps)
- Velocity® VS-R™ Wolff® Model VEL71-T12-160W VS-R Bi-Pin
- SPEED® 315VS-R Wolff® Model SPD75-T12-315VS-R VS-R Bi-Pin (Canopy and side tanner lamps)
- Heraeus E400 HPT
- Philips Model HPA 400/30s
- CosmoTech Model 23045 (SolarMax™ IFT facial unit)
- COSMOLUX® RA plus 15504/40W (Shoulder unit)

DISCONNECT POWER BEFORE ATTEMPTING TO CLEAN, RELAMP, OR ENGAGE IN THE MAINTENANCE OF THIS PRODUCT.

THIS EQUIPMENT MUST BE EARTH GROUNDED.

This product is in conformity with performance standards for sun lamp products under 21 CFR PART 1040.20 and ANSI/UL Standard 482. Certified to CAN/CSA Standard C22.2 NO. 224.
**DANGER**

Rayonnement ultraviolet. Veuillez suivre les instructions. Évitez une exposition excessive. Tout comme pour les rayons du soleil, une exposition excessive peut causer des blessures aux yeux et à la peau et provoquer des réactions allergiques. Une exposition répétée peut causer le vieillissement prématuré de la peau et provoquer le cancer de la peau. **PORTEZ DES LUNETTES PROTECTRICES:** LE NON-RESPECT DE CETTE CONSIGNE DE SÉCURITÉ PEUT ENTRAINER DE GRAVES BRÛLURES OU DES LÉSIONS OCULARIÈRES À LONG TERME. Les médicaments ou les produits cosmétiques peuvent augmenter votre sensibilité au rayonnement ultraviolet. Consultez un médecin avant d’utiliser la lampe solaire si vous prenez des médicaments, si vous souffrez d’une maladie cutanée ou si vous croyez être particulièrement sensible aux rayons du soleil. Si vous ne bronzez pas au soleil, il est peu probable que vous bronquerez sous une lampe solaire. Les enfants, les personnes âgées et les personnes qui ont une peau claire qui brûle facilement, ne bronze jamais ou alors très peu, ne devraient pas utiliser cette lampe.

Étendez-vous sous la partie supérieure, puis abaissez celle-ci aussi bas que possible, en veillant cependant à conserver un espace d’au moins 3 pouces (7,60 centimètres) entre le corps et le panneau de plastique transparent de la partie supérieure, afin d’éviter une exposition excessive. Les autres parties du corps peuvent toucher les panneaux de plastique transparents. N’utilisez pas la lampe sans les panneaux de plastique transparents. La première semaine de bronzage, les personnes qui n’ont pas un hâle initial ne doivent pas se faire bronzer tous les jours. Ne vous faites jamais bronzer plus d’une fois par jour. Le bronzage commence normalement à apparaître après les premières séances : il atteint son apogée au bout d’environ quatre semaines. Les personnes qui ont déjà un teint hâlé peuvent commencer à des niveaux plus élevés, selon l’importance de leur hâle initial.

Les lampes neuves émettent approximativement 10 % de plus de rayons ultraviolets au cours des 50 premières heures de fonctionnement. Le temps de bronzage doit donc être réduit d’environ 10 % pendant cette période.

**AVERTISSEMENT :** Lisez le livret d'instructions avant d'utiliser cette lampe solaire. Les autres personnes présentes dans la pièce doivent aussi porter des lunettes protectrices lorsque les lampes sont allumées. Coquilles de protection fournies ou l’équivalent, tel que le stipule le document 21 CFR 1040.20. Les autres types de lunettes protectrices ne peuvent pas assurer une protection adéquate. Utilisé sans lunettes protectrices, ce produit peut causer des brûlures ou lésions oculaires graves. Si vous souffrez d’un malaise, arrêtez l’utilisation et consultez un médecin.

**SEULES LES LAMPES SUIVANTES ONT ÉTÉ HOMOLOGUÉES POUR CET ÉQUIPEMENT :**

- BRONZING SUN™ PLUS Wolff® Modèle BSP 71-T12-100WR Bi-Pin
- SPEED® 225R Wolff® Modèle SPD71-T12-225R Bi-Pin (banc seulement)
- Velocity® VS-R™ Wolff® Modèle VEL71-T12-160W VS-R Bi-Pin (partie supérieure et appareil de bronzage à lampes latérales)
- Heraeus E400 HPT

Unpacking and Inspection

Your sunbed comes in two cardboard cartons, one for the canopy and one for the bench and ballast tray. Open the cartons and remove the sunbed parts as follows.

The boxes that the STARPOWER™ come in dismantle to allow easy removal of the units. Remove the box tops and pull the sides out. The bench and canopy are each wrapped in plastic. Remove the plastic and, with a helper or two, grasp the canopy and pull it from the carton bottom. Do the same for the bench. Do not attempt to lift either unit with the plastic still on as it may slip. The endcaps on the canopy should not be used to lift the unit. The ballast tray is secured to the carton bottom with brackets. Remove these brackets from the ballast tray with a Phillips screwdriver.

Note! The cartons are reusable. You may wish to save them for future use.

After unpacking the unit, check to make sure you have received the following:
- Canopy unit
- Bench unit
- Rear lamp module
- Ballast tray
- Access panel
- Two large bench endcaps
- Body fan kit
- Shoulder tanner kit
- Two bags containing necessary assembly hardware, safety goggles, a pillow and a tube of touch-up paint.

Inspect these items, including the canopy and bench, to make sure they are free from any visible damage. Report the extent of any damage to the transportation company.

Record the serial numbers of the canopy and bench, and the ballast tray ID number in the area provided at the back of this manual. This information will be required whenever you call customer service.
Pre-Installation Planning
Before you begin to assemble your sunbed, you should observe the following considerations.

**WARNING**
Shock hazard. Disconnect power before servicing.

**CAUTION**
Use of a voltage source above 230V AC may prevent proper operation of the sunbed and could cause damage and void the warranty.

- The **STARPOWER® 548** operates from a 220V AC power source. The unit should be wired to a dedicated circuit capable of providing **60 Amp** service. This unit must be hardwired directly to a junction box. **We recommend connection by a professional electrician.**

- **IMPORTANT!** Voltage must be below 230V AC or may require a Buck Booster.

**CAUTION**
Air from the room is used to cool the sunbed. Maximum ambient room temperature should be 80°F. Place your sunbed no closer than 6” from any wall. Make sure nothing obstructs the airflow into or out of the fan openings. A poorly ventilated room may cause the unit to become hot and cause discomfort to the user.

**CAUTION**
Proper assembly of your sunbed requires four people. Plan to have a few helpers assist you.
Tools Required

You will need the following tools to assemble your sunbed.

- #2 Phillips Screwdriver
- 9/16” and 7/16” Wrenches
- Adjustable Wrench

-AND-

Hardware Inventory

Open the hardware bags and remove the hardware. In addition to a pillow, an RJ-11 (phone type) cable and touch-up paint, make sure you have the following hardware items.

- #10 x 1” Phillips Pan Head Screw
  Quantity 14

- #10 x 1/2” Phillips Pan Head Screw
  Quantity 12

- 3/8-16 x 1 1/4” Hex Socket Bolt
  Quantity 18

- 3/8-16 Self-locking Hex Nut
  Quantity 18
Installation - Hardware Inventory

Additional hardware in Body Fan box

- #10 x 1/2" Phillips Pan Head Screw
  Quantity 5
- 1/4-20 x 1 1/2" Hex Head Bolt
  Quantity 4

Hardware in Shoulder Tanner box

- #10 x 1/2" Phillips Pan Head Screw
  Quantity 4
- 5/16" Washer
  Quantity 4
- 5/16-18 Stud
  Quantity 4
- 5/16-18 Self-locking Hex Nut
  Quantity 4
- 1/4" Allen Wrench
  Quantity 1

Canopy Adapter Arm
Quantity 2

Adapter Gusset
Quantity 4

Safety Goggles
Quantity 1

Access Panel Key
Quantity 1

5/16” Allen Wrench
Quantity 1
Installation - Assembly Procedures

Assembly Procedures

Before installing the bench endcaps you must install the body fan power cord into the foot end endcap, as shown below, and the shoulder tanning unit power cord into the head end endcap. The connector will snap securely into the endcap.

Snap body fan power cord into hole in foot end endcap.

Foot end endcap shown.

BODY FAN POWER CORD
Parts needed:
Foot end endcap
Head end endcap
14 - #10 x 1” Phillips pan-head screws
4 - #10 x 1/2” Phillips pan-head screws

Attach endcap with 1” screws as shown.

Use 1/2” screws here.

Foot end endcap shown.
Installation - Assembly Procedures

Parts needed:
Canopy
2 - Canopy Adapter Arms
4 - Adapter Gussets
12 - 3/8 x 1 1/4” hex-socket bolts
12 - 3/8” self-locking hex nuts

Attach adapter arms to canopy arms using two adapter gussets and six bolts and nuts.
Install this bolt as a positioning aide.

2 Slip canopy arm onto hinge arm. Positioning bolt will engage the slot on top of hinge arm and hold canopy up while the other bolts are installed.

3 Install other bolts as shown. Secure all six bolts in place with self-locking nuts.

4 Remove this pin and discard.

Parts needed:
6 - 3/8 x 1 1/4" hex-socket bolts
6 - 3/8" self-locking hex nuts
Parts needed:
Rear lamp module
8 - #10 x 1/2" Phillips pan-head screws

Secure rear lamp module in place with 8 screws where shown.
Parts needed:
Body fan kit
Shoulder tanner kit

Install the body fan and shoulder tanner as described in the instruction sheets included in their respective boxes.
Slide the ballast tray under the unit and pull the cords through to the rear. Install the access panel by putting it in place and locking with the access panel key.
Electrical Connections

At the rear of the sunbed, connect the two canopy power cords, two bench power cords and rear lamp module cord from the ballast tray to their respective power receptacles. Simply match the plug to the receptacle, push on firmly and secure by twisting the threaded locking ring.

Helpful Hint: Line up the plug with the proper receptacle and push in. Apply pressure to the plug and twist the locking ring counter-clockwise until you feel the plug click into place. Then turn the locking ring clockwise to secure it. The ring will click when fully engaged.

Connect the RJ-11 (phone type) cable between the canopy and rear jack on the ballast tray. The double jacks on the front of the tray are for remote connections. Connect main power cord as described in Pre-Installation Planning.
Final Adjustments

Your sunbed uses a smooth gliding spring lift system to raise the canopy. This lift system may need to be adjusted slightly due to shipment. Remove the front access panel. Use a wrench to turn the hex shaped Lift Adjustment lugs (shown below), clockwise for more lift and counterclockwise for less. When adjusted properly, the canopy should raise easily as well as rest fully closed. Always adjust both lugs equally.

Make sure the air filters are in place. The filter on top of the ballast tray simply sits over the vent holes. Airflow holds it in place when the unit is on. The airflow arrow on the side of this filter should point down. The filter hanging under the bench should be installed with the arrow pointing up.
Remote Connections

Your sunbed incorporates advanced circuitry allowing it to connect and communicate with most remote control systems. If a remote system is to be used, first determine whether the remote system is a T-Max® System or a standard remote system operating with a control relay. Follow the appropriate instructions for your system type.

Two remote ports are located on top of the ballast tray at the front. Both ports work the same. A Remote Control Bypass plug is already installed in one of the remote control ports. Your sunbed will not operate without the Remote Control Bypass plug or a remote system connected.

ATTENTION: Although the Remote Control Bypass plug provided with your sunbed will work wherever a T-Max® terminator is called for in the series, the T-Max® terminator will not work as a bypass plug. Normally, a bypass plug is needed only when your sunbed is operated without a remote system connected.

You will notice some wire clamps along the side of the fan housing under the bench. These are for the remote cables to keep them out from under the ballast tray when rolling the tray in and out of the unit. Route the remote cables as shown below, leaving some slack for the tray to roll out.
**CAUTION**
The remote connection is not designed to supply or accept high voltage, nor can it provide power to an external timer. The sunbed's remote interface circuitry operates on 5 volts, attempting to connect it to any higher voltages will damage the sunbed as well as void your warranty.

---

**T-Max® Products**
The T-Max® remote systems offer the ultimate in sunbed control, while allowing the tanner easy straightforward operation. Your sunbed is configured to directly connect to this system. The circuitry inside your sunbed eliminates the need for the T-Max® 1A or 3A when connecting to the T-Max® Manager series. Your sunbed supports the auto addressing feature of the latest T-Max® Manager models and the following parameters: 2, 5, 6, 7, 8, 9, 10, 14, and 15. See your T-Max® manual for descriptions of these parameters and how they function.

**T-Max® Manager Remote System**
This system is ideal for multiple sunbed installations. Simply connect the RJ-22 modular cable(s), described in the T-Max® Manager manual, into the remote port(s) located on top of the ballast tray at the front and follow the instructions that came with your remote system, noting figure 1. If you have an older T-Max® Manager that doesn’t support auto addressing, set the address, or “id”, of each sunbed manually as described in Setting the address manually. You can place your sunbed at any location in the series.

---

**NOTE:** A T-Max® 1A can be substituted for the 3A in figure 1.
T-Max® 1A and 3A Remote Systems

In single sunbed installations, the T-Max® 1A and 3A can offer the same control as the T-Max® Manager, eliminating the need for a Manager. If you're using a 1A in this manner, it must have a chip labelled “master” installed on its circuit board. The remote control bypass plug must not be used in this configuration. The 3A may be used as a “master” with no modification.

After you have set the T-Max® 1A’s, or 3A’s, address to “0” (refer to your T-Max® user’s guide) and the sunbed’s address to “1” (see right), simply connect the RJ-22 modular cables, described in the T-Max® user’s guide, directly into either port located on top of the ballast tray at the front and either port on the back of the T-Max® 1A or 3A. See figure 2.

Setting the address manually

Before connecting your sunbed to the T-Max® Manager or T-Max® 1A or 3A, the address of your sunbed must first be set. Set the “id” manually as described below.

Setting the “id”

1. Make sure no cables are plugged into your sunbed’s remote ports.
2. Remove and reapply power to the unit.
3. Press and hold the stop button, located on the sunbed display, for three seconds and release. The display should indicate an “id” number from “0F” to “252”.

<table>
<thead>
<tr>
<th>1-99</th>
<th>99</th>
</tr>
</thead>
<tbody>
<tr>
<td>100-199</td>
<td>99</td>
</tr>
<tr>
<td>200-252</td>
<td>52</td>
</tr>
</tbody>
</table>

4. If you are using a T-Max® 1A or 3A as a “master” remote, the “id” of the sunbed must be set to “1”. If you are using a T-Max® Manager each sunbed must be assigned a different “id”. To set the “id” press the timer button, to count up, or the body fan control button, to count down, until the desired number is achieved.
5. Press the stop button to return to the normal display mode.

NOTE: A T-Max® 1A with a “master” chip can be substituted for a 3A in figure 2.
Remote systems using a Control Relay

Most non-T-Max® remote systems control the sunbed by the use of a relay. The relay operates the sunbed by connecting and disconnecting a pair of wires leading from the sunbed. Refer to the user’s manual provided with your remote system to determine if it operates in this way. To connect your sunbed to this type of system a remote interface kit is required. Contact your place of purchase to obtain the kit. Figure 3 details a typical connection. Follow the instructions provided with the kit and from the remote’s manual to make the necessary connections.

CAUTION
The remote connection is not designed to supply or accept high voltage, nor can it provide power to an external timer. The sunbed’s remote interface circuitry operates on 5 volts, attempting to connect it to any higher voltages will damage the sunbed as well as void your warranty.
Before You Tan

Before using your sunbed, please note the following important precautions.

- Your skin should be free of cosmetics, oils, or other body lotions prior to tanning except for those specifically made for use with tanning devices. However, do not remove natural body oils by bathing or showering immediately before tanning.

- Your hair should be free of gels, mousses, sprays, or other hair products prior to tanning. These products can cause damage to the sunbed acrylic. As an alternative, a shower cap or towel can be worn to keep treated hair away from the sunbed surfaces.

- This unit intended for individual use. Only one pair of eyewear is included.

Exposure Times

Follow the guidelines for skin type and exposure times as shown in the table below. Untanned persons should not tan on consecutive days during their first week of tanning. Never tan more than once a day. Tanning normally appears after the first few sessions and maximizes after approximately four weeks. Tan once or twice per week thereafter to maintain appearance. Persons already having a base tan may begin at advanced levels corresponding to the extent of their base tan.

### Maximum Exposure Time Is 12 Minutes
Using Your Sunbed
When connected to the T-Max® Manager or T-Max® 1A or 3A.

1. Lift canopy, lie down on bench (face up), lower canopy toward your body using canopy handle. Maintain at least 3” between your body and the canopy and rear lamp module acrylics.
2. Put on your safety goggles.
3. Assuming the remote system has been set to allow a pre-tanning delay time, the timer display (E) will repeatedly flash the delay symbol “dL” and then the remaining... time has expired to begin the tanning session. The lamps will turn on and the timer will begin to count down.
4. When the timer reaches 0 the lamps turn off. If you want to interrupt your session before time expires, press the stop button (F).
5. Raise the canopy by using the canopy handle, do not push up on the acrylic shield. The cooling fans run for a period of time after the lamps shut off to aid in cooling the sunbed. The timer will indicate “...” as a reminder to clean the sunbed. After the sunbed is cleaned press the timer button and the display will return to “0”.

WARNING
Wear protective eyewear. Failure to may result in severe burns or longterm injury to the eyes.
Using Your Sunbed

When used as a stand alone unit or when connected to a remote system using a control relay.

1. Lift canopy, lie down on the bench (face up), lower the canopy toward your body using the canopy handle. Maintain at least 3” between your body and the canopy and rear lamp module acrylics.

2. Put on your safety goggles.

3. Press the timer button (G) to begin the tanning session. The lamps will turn on and the timer will begin to count down.

4. If a tanning time less than the displayed time is desired, repeatedly press the timer button (G) to decrease the remaining time.

5. When the timer reaches 0 the lamps turn off. If you want to stop your session before time expires, press the stop button (F). You will have ten seconds to restart with the remaining time, otherwise the timer will reset to 0.

6. Raise the canopy by using the canopy handle, do not push up on the acrylic shield. The cooling fans run for a period of time after the lamps shut off to aid in cooling the sunbed.

A Face tanner control - Turns face tanners on and off during use. Face tanner lamps require one minute to relight.

B Shoulder tanner control - Turns shoulder lamps on and off during use.

C Body fan control - Controls the speed of the body fan during use. (At your feet)

D Body fan speed indicator - Indicates speed of fan. (OFF - LOW - MED - HIGH)

E Timer display - Displays remaining time.

F Stop button - Stops tanning session.

G Timer button - Turns bed on. Timer display shows remaining time. If a lesser time is desired, press timer button until desired time is displayed.

**WARNING**

Wear protective eyewear. Failure to may result in severe burns or longterm injury to the eyes.
Care and Maintenance

Cleaning After Use

Clean and disinfect your tanning bed's bench, canopy and rear lamp module after each use. Use a non-abrasive disinfectant cleaner that does not contain ammonia or ammonia derivatives. Ammonia may damage the acrylic shield. Spray the acrylic lightly with disinfectant and wipe dry with a clean soft cloth. We recommend SunQuest® disinfectant and SunQuest® acrylic cleaner.

Thorough Periodic Cleaning

Introduction
The cooling fans draw air through the bed and over time will cause a dust buildup on the lamps and reflectors. This will reduce the tanning effectiveness of the bed. When a dust buildup is observed, it is necessary to thoroughly clean the inside of the unit.

WARNING
Shock hazard. Disconnect power before removing any protective covers.

Cleaning the Canopy and Bench
Step 1 Remove the acrylic shields and lamps as described in Lamp and Acrylic Replacement.
Step 2 With a soft cloth, wipe the entire length of each lamp.
Step 3 Clean both sides of the acrylic shields with a non-ammonia disinfectant cleaner.
Step 4 Wipe the reflectors with a clean damp cloth.
Step 5 Reinstall the lamps and acrylic shields.
Step 6 Clean or replace air filters on top of ballast tray and under bench (see Final Adjustments). Replace with 10” x 24” x 1” furnace filters.

Mechanical Inspection
Your tanning bed has been built for years of service. To ensure trouble-free operation throughout its life, inspect the unit's mechanical integrity every 400-500 hours of use.

- Inspect the unit's fasteners verifying that all are firmly in place.
- Inspect lift adjustment. Adjust for proper lift if needed. See Final Adjustments.
- Inspect the AC power cord and its connections.
- Inspect the acrylic. Broken, cracked or badly scratched acrylics should be immediately replaced.
- Check damper operation. The damper limits the canopy's movement speed. Replace if canopy raises and lowers too quickly.
Lamp and Acrylic Replacement

Introduction
To be assured of maximum tanning effectiveness, change 100W lamps after approximately 800-1000 hours of use. Change 160W lamps after 600-800 hours of use. Tanning will continue after this time but at a slower rate. To ensure trouble-free operation of your sunbed, replace the lamp starters whenever the lamps are replaced.

![WARNING]

Shock hazard. Disconnect power before removing any protective covers.

Maintenance Height Feature
The STARPOWER® 548 offers a convenience feature when maintenance must be performed. Behind the front access panel is a release handle (see Final Adjustments). With the canopy open, pull this handle and raise the canopy to its maintenance position, allowing easier access to lamps, etc. When finished, simply close the canopy to return to normal operation.

Opening/Replacing Acrylic Shields
Refer to the illustration on the next page while reading this instruction. The acrylic shield in the bench is secured in place by two quarter-turn latches along the front aluminum frame of the acrylic. The aluminum frame around the acrylic offers support as well as allowing the acrylic to hinge open without removing it from the bed. Use a coin or flat-bladed screwdriver to turn the latches a quarter turn to open the acrylic. Standing in front of the bed, lift the long edge of the acrylic. On the inside of the bench, along the front, are two supports for the bench acrylic. Release them from their clips and swing up to hold the acrylic open. You may remove the acrylic by lifting it out of its hinge channel along the back edge.

The other acrylics are held in place by four quarter-turn latches each. The canopy and rear lamp module acrylics also swing open on a hinge and may be removed by lifting out of the channel along the back edge.

When you are finished, simply reverse the above directions to secure the acrylic shields.
Removing/Replacing Lamps

After opening (or removing) the acrylic shields, replace lamps as follows.

Step 1  Grasp a lamp at one end and at the middle and turn the lamp one quarter turn. Gently remove the lamp from its holders.

Step 2  Reinstall the lamp by inserting the pins located on the ends of the lamp into the slots on top of the lamp holders and turn the lamp a quarter turn. It should click in place.

Recommended Replacement Lamps

We recommend using the lamps specified below. Use of uncertified lamps is a violation of Federal regulations and will void your warranty. The 100W lamps have an average life of 800-1000 hours of effective tanning use. The 160W lamps have an average life of 600-800 hours. Lamps used longer than that begin to lose their effectiveness even though they continue to light.

Recommended Replacement Acrylics

Acrylics vary greatly over time in their ability to effectively transmit UV light. Acrylics sold by ETS have been life tested to ensure proper transmission throughout their useful life.

Only the following lamps have been certified for use in this equipment:

Bench lamps

BRONZING SUN™ PLUS Wolff® Model BSP 71-T12-100WR Bi-Pin -or- SPEED® 225R Wolff® Model SPD71-T12-225R Bi-Pin

Canopy and rear lamp module lamps

Velocity® VS-R™ Wolff® Model VEL71-T12-160W VS-R Bi-Pin -or- SPEED® 315VS-R Wolff® Model SPD75-T12-315VS-R VS-R Bi-Pin

SolarMax™ IFT facial unit

Heraeus E400 HPT -or- Philips Model HPA 400/30s -or- CosmoTech Model 23045

Shoulder tanner

COSMOLUX® RA plus 15504/40W
Removing/Replacing Face Tanner Lamps

After removing the canopy and/or rear lamp module acrylic shields, replace the face tanner lamps as follows:

**Step 1** Support the face tanner assembly with your hand while unscrewing the two retaining screws. The face tanner glass casing will swing downward.

**Step 2** The lamp can now be exchanged. The lamp holders are equipped with spring contacts which enable the lamp to be removed easily. Remove the old lamp and discard. Install the new lamp, using a clean cloth or paper towel. Ensure that the lamp is firmly seated in the lamp holders.

**Note!** Never take hold of the lamp such that your fingers are in contact with the lamp glass. Finger oils will greatly reduce the lamp’s operational life.

**Step 3** Gently close the face tanner glass casing and lock it closed with the screws. Ensure that the screws firmly secure the glass casing.

---

**DANGER**

Unfiltered light from face tanner can cause severe burns. Never turn sunbed on while face tanner is disassembled or when glass filters are removed. Immediately discontinue use of this equipment if face tanner glass is broken or any unfiltered light can be seen escaping face tanner assembly.
## Troubleshooting

<table>
<thead>
<tr>
<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
</table>
| Sunbed not tanning                                        | 1. Clean sunbed, see Thorough Periodic Cleaning.  
2. Ensure supply voltage is between 208 and 230V AC.  
3. Replace lamps if lamp hours are greater than 800hrs.  
4. Replace acrylic.                                           |
| Lamps fail to light and timer display is blank            | 1. Make sure the unit is connected to a power source.  
2. Check source of AC power. Reset circuit breaker or replace fuse.                                                                 |
| The last minute of tanning time does not count down from 59 seconds, but some time less than 59 seconds | If the timer button has been pressed to decrease tanning time during the session, the time expired in the current minute is subtracted from the last minute. |
| One or more lamps fail to light                           | 1. Check that lamp is installed correctly.  
2. Switch unlit lamp with a lamp that lights, if new lamp lights and old lamp still does not, replace old lamp. |
| The face tanners will not come on                         | 1. Face tanner operation is initially delayed by 5 seconds.  
2. Face tanners will not relight until cooled.  
3. Replace face tanner lamp, see Removing/Replacing Face Tanner Lamps.                                                   |
<p>| The canopy will not stay up / The canopy will not stay down | Your sunbed uses a smooth gliding spring lift system to raise the canopy. This lift system may need to be adjusted slightly from time to time. See Final Adjustments for proper adjustment procedures. The canopy should raise easily as well as rest fully closed. |
| My canopy opens and closes too fast (slamming, not enough resistance) | Your sunbed utilizes a damper which limits the canopy’s movement speed. This also serves as a safety device in case of spring lift failure as the canopy will not crash down. Replace the damper on back of unit. |
| I forgot what address, or “id”, I set my sunbed to         | By holding the body fan button for 3 seconds the timer display will briefly display three numbers; the installed timer software version, a factory set timer code and then the sunbed’s “id” number. |</p>

</tr>
<tr>
<td>Timer display is indicating Er 94</td>
<td>Requested session time exceeds maximum time allowed.</td>
</tr>
</tbody>
</table>
| Timer display changes to indicate a tanning time after the timer button is pressed but lamps do not come on | 1. Bypass plug is not installed, see Remote Connections.  
2. A non-SunStar® bypass has been used. See Remote Connections.  
3. If remote is being used, other than T-Max® Manager, the external timer may not be activated.  
4. Remote wiring is incorrect, see the instructions provided with the remote interface kit. |
| My bed is connected to the T-Max® Manager remote system and when the delay time has expired the timer display starts counting down but the bed lights do not come on | The auto start feature of the remote system is disabled, see the instructions provided with your remote system. |
| My bed won’t work with the T-Max® Manager remote system | 1. The sunbed must first be set to a unique address, see Remote Connections.  
2. The bypass or terminator plug may be installed in the series in an inappropriate location. Plug the bypass plug only into the bed at the end of the series. |
| Timer display continues to show a 0 after the timer button is pressed | 1. T-Max® Manager remote system has not yet been set.  
2. Sunbed address is not set correctly, see Remote Connections. |

<thead>
<tr>
<th><strong>Problem</strong></th>
<th><strong>Solution</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>My bed is connected to a T-Max® remote system but I am having trouble getting into “id” mode</td>
<td>You have probably attempted to connect your sunbed to the remote system already. Disconnect the remote plug(s) from the ports at the front of the ballast tray, wait 90 seconds and try again.</td>
</tr>
<tr>
<td>My bed, connected to a T-Max® Manager, did not display “dL” but does indicate: “0” a tanning time and the lamps have come on a tanning time but the lamps have not come on</td>
<td>1. Remote device has not been set. 2. The sunbed has not been connected to the remote system, see Remote Connections. 1. Delay time of T-Max® Manager has not been set. 2. Delay time has expired and session has begun. Auto start function of T-Max® Manager has been turned off. Press the timer button to turn on lamps.</td>
</tr>
<tr>
<td>When auto-addressing the first bed does not register an “id”</td>
<td>When using the auto address feature of the T-Max® Manager you must wait 10 seconds from the time you start the auto address function before addressing the first bed.</td>
</tr>
<tr>
<td>When using a T-Max® 1A my sunbed won’t function properly</td>
<td>SunStar® Bypass plugs or terminator plugs may be needed if the T-Max® 1A and the sunbed are over 100 feet apart. Install the plugs in the open remote port in the sunbed and the T-Max® 1A.</td>
</tr>
<tr>
<td>My salon suffers frequent, short power outages and clients complain about losing session time</td>
<td>If you have a T-Max® Manager, changing parameter 23 from “0” to “1” will allow the tanning bed to remember how much time was left when power goes out and resume its session after power is restored. Consult your T-Max® Manager manual for information on setting parameters.</td>
</tr>
